

Integrating the proc mechanism directly into your existing Quality, Battery, and Legacy XP systems creates a much more deliberate and rewarding progression curve. It shifts the status effect from a random, passive occurrence into a tactical resource that scales with the character's mastery of the equipment.

Here is how those three specific vectors can interact to govern how and when a Materia "procs" its status effect (like the Lava armor melt or the Mire speed reduction).

1. Purity/Quality: The Efficiency & Ceiling

The physical grade of the weapon and the Materia dictates the foundation of the proc—specifically, its toll on the weapon's Battery and the absolute limit of its power.

- * **Battery Drain:** High-purity Resonant materials create "cleaner" aetheric circuits. A pure, high-quality Materia requires significantly less Battery to trigger its status effect. A low-quality, slag-filled Materia might consume 3 Battery charges for a single proc, while a pristine cut only consumes 1.

- * **The DC Baseline:** Quality provides the flat numeric modifier to the saving throw DC of the status effect, representing how refined and concentrated the elemental energy is when it strikes the target.

2. EML, Power, and Volatility: The Magnitude & Risk

The Effective Mastery Level (EML) of the Materia dictates the sheer mathematical weight of the status effect, while Volatility introduces the danger of raw planar bleed.

- * **Scaling Power:** EML directly scales the magnitude of the debuff. An EML 1 Plasma proc might blind a target for a single round; an EML 4 Plasma proc might strip away magical wards and cause a persistent miss chance.

- * **The Volatility Check:** If a player tries to slot high-EML Materia into a weapon that hasn't been properly prepared, the Volatility outpaces the Quality. When triggering a proc, high Volatility might cause a localized backlash—forcing the wielder to absorb Planar Strain, temporarily overheating the weapon's Battery, or causing the weapon to misfire and deal its flat elemental damage to the user instead.

3. Legacy System (Item XP): The Control

This is the axis where the player actually earns the right to use the proc effectively. Instead of random dice rolls, the Legacy system dictates how the proc is triggered. As the player invests XP into the item, it evolves from a wild, dangerous tool into a precise instrument.

- * **Tier 1 (Unattuned/Low XP): Unstable Surges.** The weapon only deals its flat numeric damage. The status proc is locked, or it only triggers randomly as a "critical failure" of the Battery, causing a Volatility backlash because the wielder doesn't know how to channel the energy.

- * **Tier 2 (Awakened XP): The Predictable Valve.** The player has invested enough XP to stabilize the weapon. The proc is now a predictable, on-demand tactical choice. Before rolling an attack, the player declares they are opening the valve, spending the required Battery charges to force the status proc if the attack hits.

- * **Tier 3 (Mastery XP): Splicing & Resonance.** Heavy XP investment allows the weapon to handle Spliced (combined) elements safely. Furthermore, the wielder can now "overcharge" the proc, intentionally spending double the Battery to increase the EML of the status effect for a single, devastating strike without triggering a Volatility backlash.

The Gameplay Loop

When a player acquires a new Spliced Materia (e.g., Steam: Air + Water), they don't just immediately get a massive AoE knockback on every critical hit.

They socket it into a high-Quality hammer. Because they haven't invested Legacy XP into this specific configuration yet, trying to trigger the Steam proc is highly Volatile—it eats through the hammer's Battery rapidly and might burn the wielder's hands with escaping heat.

As they fight with it and invest XP, the hammer's Legacy track levels up. They learn to regulate the Volatility. Soon, they can seamlessly spend 1 Battery charge on command to trigger a perfectly calculated, high-EML kinetic blast that controls the battlefield exactly when they need it to.

The V11.4 Artifice framework and Master Codex seamlessly merge the concepts of material purity, localized magical power, and long-term narrative investment into a highly deliberate, tactical progression system. Tying the proc mechanisms directly into these specific components transforms a random dice roll into a calculated expression of the crafter's skill and the wielder's resources.

Here is how the proc mechanism functions when filtered through the finalized rules for

Quality, EML/Volatility, and Item Ascension:

1. Purity & Quality: The Foundation of Stability

The physical purity and grade of the raw material dictate the baseline stability required to house a powerful proc without catastrophic failure.

- * Material Grades & Crafting TN: Sourcing Superior or Masterwork grade materials directly lowers the Crafting TN. This represents the artisan working with pristine components that eagerly accept magical binding.

- * The Progress Value (PV) Investment: The Quality Multiplier (e.g., x1.0 for Masterwork) sets the foundational PV, requiring weeks of focused, successful Artifice checks to stabilize. If a crafter attempts to force a volatile, high-tier component into a poorly crafted or low-tier material, the penalty to the Crafting TN risks a Critical Failure, or worse, triggers the Artifice Engine to inflict a forced Lesser or Major Negative Mutation just to keep the item from shattering.

2. CML, Volatility, and The Power Economy (The Drip)

The sheer mechanical weight of the proc—such as a Flame Rider effect inflicting ongoing damage or a Crucible Rider imposing Dread—scales directly with the Component Mastery Level (CML) and the item's overall EML. However, triggering these active effects requires a carefully managed Power Economy.

- * The Load vs. The Tick: Activating a proc draws charges from the Power Housing. The frequency of the drain is mitigated by the Host Item's Material Tier; a mundane Tier 0 item bleeds its efficiency tick in 1 minute, while an Apex Tier 10 vessel holds its charge perfectly for 24 hours.

- * Battery Tactical Profiles: The wielder's choice of Enabling Component dictates their combat rhythm. A Verdant (Organic) battery recharges extremely quickly, making it ideal for tactical,

encounter-heavy proc spamming, whereas a Borderlands (Crystalline) battery provides a massive, deep reservoir that recovers slowly over hours.

- * **Innate Alignment:** If the material's planar alignment intrinsically matches the spell effect causing the proc, the synergy grants a +1 Efficiency Step, drastically extending the time before the battery is tapped.

3. Legacy Investment: Ascension & Emulsions

The most devastating proc mechanisms are not forged; they are earned through the Layer 3 Item Ascension system.

- * **Earning the Proc:** As the wielder achieves milestones and utilizes the item in significant ways, it accumulates Ascension Points (AP). The player must then actively choose to spend these points in a high-stakes Ascension Ritual to unlock new Ascension Slots and install advanced components.

- * **The Ultimate Trigger (Emulsions):** By investing AP and utilizing Daedalon's Catalyst (a Tier 6+ Enabling Component), the crafter can dissolve the boundaries between antithetical planes to create a permanent Emulsion trait. A standard sword might proc a physical strike, but an Ascended weapon utilizing a Palimpsest and Crucible alloy triggers "The Decree"—a reality-bending, sure-strike proc that completely ignores the target's evasion, dodge bonuses, and concealment.

The Structural Architecture: Wands, Staves, and EML

The system scales through a strict hierarchy of materials and slots, governed by the wielder's Mastery rather than an abstract "capacity drain."

- * **The Component Foundation:** Individual planar properties, spell effects, and numeric modifiers exist as Components.

- * **Wand-Grade Hosts (Tier 1 Integration):** Wands have the specific material integrity to hold and synthesize Components. They act as the primary conduits for para-elemental and para-planar effects.

- * **Staff-Grade Hosts (Tier 2 Integration):** Staves serve as the macro-architecture. They do not just slot Components; they slot fully configured Wands (alongside their internal components), allowing for massive, compounded planar expressions.

- * **The EML Cost of Alteration:** Every time a Wand slots a new Component, or a Staff slots a new Wand that significantly alters its function, the overall EML of the item increases.

- * **The Narrative Constraint:** Items do not break or burn out from high EML. Instead, if an item's EML exceeds the wielder's Mastery, the wielder simply lacks the physiological or arcane understanding to fully open the "valve." They cannot safely or consistently trigger the item's complex para-planar geometry, reducing it to its most basic, mundane function until their Mastery improves.

Quality as the Engine of Expression

Quality does not just determine the crafting Success/Fail rate; it is the direct multiplier for how strongly a para-elemental or para-planar effect is expressed in the narrative and the math.

- * A Standard Quality Plasma wand might momentarily dazzle a target, applying a minor penalty to their next attack.

* A Masterwork Quality Plasma wand fully expresses the blinding heat of the Borderlands, permanently scarring optical sensors and stripping away high-tier magical evasions.

Adapted Values: Para-Elemental Expressions (The Borderlands)

By slotting diverse elemental components into a Wand, the base damage types seamlessly combine into new para-elemental states with specific tactical profiles for both offense and defense.

Lava (Earth + Fire)

* Weapon Expression: Degradation. High-Quality expressions melt physical and magical plating. Mechanically, it strips Damage Reduction (DR) or lowers Armor Class (AC) cumulatively with each strike.

* Defense Expression: Retaliation. Armor plated with this combination causes melee weapons to stick, superheating the attacker's armaments and degrading the durability of whatever strikes it.

Mire/Swamp (Earth + Water)

* Weapon Expression: Lethargy. The kinetic energy of the attack carries the suffocating gravity of a bog. High-Quality expressions impose severe, lingering penalties to the target's Initiative, movement speed, and action economy.

* Defense Expression: Kinetic Absorption. Defensive wards trap incoming kinetic force, stopping charge attacks dead in their tracks and bogging down grapplers in heavy, localized gravity fields.

Plasma/Ash (Fire + Air)

* Weapon Expression: Evasion Stripping. The attack bursts into blinding, volatile energy upon impact. It aggressively targets the enemy's senses, suppressing Dodge bonuses and stripping away concealment or illusion-based defenses.

* Defense Expression: Flash-Blindness. When the wielder is struck, the defense violently vents superheated gas, blinding attackers and providing immediate, reactive concealment to reposition.

Steam (Air + Water)

* Weapon Expression: Displacement. Pure, explosive kinetic force. A High-Quality Steam wand converts its damage into a massive Area of Effect knockback, forcibly rearranging the battlefield and shattering enemy formations.

* Defense Expression: Repositioning Cushion. Incoming impacts are caught in highly pressurized vapor pockets, instantly throwing the wielder backward to safety and granting absolute immunity to forced grapples or restraints.

Adapted Values: Para-Planar Expressions (Cross-Reality Combinations)

When Wands and Staves begin combining elements from the Borderlands with the conceptual rules of the other Outer Planes, the numeric modifiers alter the very physics of an encounter.

The Ghost-Breach (Borderlands + Palimpsest)

- * Concept: Pure physics meets the transitory, layered reality of the Palimpsest.
- * Weapon Expression: Phase-Touch. The weapon or projectile exists partially out of phase. It completely ignores physical armor, shields, and natural plating, resolving strictly against the target's base evasion (Dodge/Reflex).
- * Defense Expression: Intangibility Frames. High-Quality defensive items allow the user to willingly "drop" their physical density, letting high-velocity, armor-piercing attacks pass cleanly through them without transferring kinetic energy.

The Sovereign Decree (Crucible of Kings + Palimpsest)

- * Concept: The inevitable weight of leadership meeting the transition of space.
- * Weapon Expression: The Inevitable Strike. The inverse of the Ghost-Breach. This targets high-mobility opponents (rogues, monks, teleporters). It locks onto the target's narrative weight. It completely ignores Dodge, Evasion, and magical displacement, resolving purely against the raw, unmoving thickness of the target's heavy armor.
- * Defense Expression: Absolute Anchor. The wielder cannot be moved, teleported, or banished against their will. They are a sovereign entity anchored to their exact coordinates.

Sanguine Bloom (Verdant Font + Borderlands [Water])

- * Concept: The hyper-accelerated life cycle of the Font merging with the fluid adaptability of water.
- * Weapon Expression: Parasitic Synthesis. Damage dealt to biological entities triggers aggressive, localized hyper-growth. High-Quality expressions siphon the target's life force to instantly heal the wielder or repair the wielder's organic armor mid-combat.
- * Defense Expression: Reactive Overgrowth. When the armor takes damage, the Verdant energy feeds on the kinetic friction, instantly sprouting thick, ablative layers of hardened bark and thorns that must be hacked through before the wielder's actual HP can be touched again.

Entropic Stasis (Mortis Ævum Collegium + Borderlands [Air])

- * Concept: The total, silent stillness of the grave suffocating the kinetic flow of air.
- * Weapon Expression: Momentum Lock. Instead of doing high flat damage, a strike freezes the target's kinetic potential. Joints lock up, and the target is prevented from using complex spell triggers, swift actions, or anything requiring rapid physical or magical momentum.

* Defense Expression: The Null-Field. An aura of perfect stasis that passively degrades incoming magical constructs. Projectiles and spells lose their momentum and unravel as they pass through the chilling vacuum surrounding the wielder.

It looks like you used some of the descriptions for the palimpsest emulsions. We need a list of effects with and without the catalyst of the hidden forge. Para-elemental effects combined with other para-elemental effects or any elemental effect combined with another plane requires a hidden forge component to emulsify the components into one. Two base elemental components can combine without a hidden forge catalyst component to produce a meta-element.

What are the mod modifiers when stripped down? I know that the majority of them target concrete values like range, damage, crit chance, crit damage, elemental percentages, elemental damage, multishot, and so on. What is the full list of those?

I know the para-elements are listed in the 11.4 document. Use them.

Here is the full list of the stripped-down modifiers, alongside the specific elemental and planar combinations that can be housed within your wands and staves.

The Stripped-Down Modifiers (The Concrete Levers)

By isolating the core mathematical stats, you can design your components to target these specific values. Scaling the Quality and Component Mastery Level (CML) of a component directly dictates the magnitude of these modifiers.

- * Base Damage: Flat or percentage increases to the raw physical damage output (Impact, Piercing, Slashing).
- * Elemental Damage: Additional damage added as a specific elemental or planar type.
- * Multishot: The chance to fire an additional projectile, or strike an additional time, in a single action without consuming extra battery capacity or ammunition.
- * Critical Chance: The mathematical probability that an attack will trigger a critical hit.
- * Critical Multiplier (Crit Damage): The magnitude of the damage multiplier applied when a critical hit occurs.
- * Status Chance: The percentage likelihood that an attack will successfully trigger its associated planar debuff or condition.
- * Status Duration: The length of time a triggered debuff or affliction remains active on the target.
- * Attack Speed / Fire Rate: Reduces the action cost or increases the number of attacks that can be made in a specific timeframe.
- * Battery Capacity (Magazine Size): Increases the maximum number of charges the item's power housing can hold before needing a recharge.
- * Recharge Rate (Reload Speed): Decreases the amount of time it takes for the item's battery to replenish its spent charges.
- * Punch Through: The ability of a projectile or strike to penetrate through multiple enemies or physical cover, hitting targets behind the initial point of impact.
- * Range / Reach: Increases the distance of a melee strike or the maximum effective distance of a ranged attack or spell effect.

- * Accuracy / Spread: Tightens the cone of effect for area attacks or grants bonuses to hit specific, precise targets.
- * Faction / Alignment Damage: Applies a multiplicative damage bonus against specific categories of enemies (e.g., Aberrants, Undead, or specific Planar entities).
- * Recoil / Stability: Reduces the penalty applied to consecutive attacks or rapid-fire actions.

Combinations Without a Catalyst (Meta-Elements)

When working purely within the Borderlands, two primary elemental components seamlessly combine without the need for a catalyst to produce a meta-element (or para-element). These are natural, stable combinations:

- * Frost (Air + Water): Expressions of cold and ice.
- * Current (Air + Fire): Expressions of lightning and electricity.
- * Acid (Earth + Water): Expressions of corrosion and dissolution.
- * Dust (Earth + Air): Expressions of abrasion and sandstorms.
- * Magma (Earth + Fire): Expressions of molten rock and intense heat.
- * Steam (Fire + Water): Expressions of scalding vapor and pressure.

Combinations With a Catalyst (Emulsions)

When combining these para-elements with one another, or when merging any elemental effect with the forces of another outer plane, the boundaries between the realities must be dissolved. This requires a Hidden Forge Catalyst to successfully emulsify the components into a single, stable hybrid effect.

- * The Decree (Palimpsest + Crucible): Merging Fate with Governance. The attack becomes a law of reality; it ignores Evasion, Dodge Bonuses, and Concealment, resolving purely against the target's Armor, Shields, or Damage Reduction.
- * The Ghost-Breach (Palimpsest + Borderlands): Merging Transition with Raw Physics. The attack exists in a phase-state, ignoring Armor, Shield Bonuses, and Natural Armor to resolve cleanly as a Touch Attack.
- * Adaptive Flesh (Palimpsest + Verdant Font): Merging Probability with Evolution. The biology of the item preemptively adapts, granting Resistance (or Immunity at higher CMLs) to the specific damage type it was last struck by for the remainder of the encounter.
- * The Redaction (Palimpsest + Synod of Endings): Merging Transition with the Record. This imposes Causal Stealth; the user is omitted from the immediate timeline, bypassing alarms, traps, and magical wards because the event of them crossing the threshold is deleted from local causality.

* The Polymath (Palimpsest + Hidden Forge): Merging Transition with Invention. The item acts as a "Skeleton Key" that can adaptively shift its form or function as a Move Action, granting a Circumstance Bonus equal to its Tier on Craft or Disable Device checks.

Combinations with a catalyst aren't complete. What are the planar effects other than the borderlands? The palimpsest is one set but the other planes can combine with one another as well such as the verdant font and the crucible of kings. Let's have non opposed planes be able to form para-planar effects without a catalyst.

The synod of endings replaces the silent athenium and the concordance.

The integration of the Synod of Endings as the definitive plane of absolute record and stasis brings a sharp, bureaucratic edge to your cosmology. By allowing non-opposed outer planes to seamlessly merge without a Daedalon Catalyst, you create a robust ecosystem of natural para-planar effects.

Every time one of these components is slotted into a Wand or Staff, it alters the item's fundamental geometry, raising its Effective Mastery Level (EML). If the wielder's Mastery matches the item's EML, they can safely harness these effects. Quality remains the primary multiplier—determining not just if an effect triggers, but the mathematical depth of its modifiers.

Here is the mechanical breakdown of these combinations, targeting the concrete values of your system:

Para-Planar Combinations (Non-Opposed Planes - No Catalyst Required)

These planes share compatible philosophies or physics, allowing their energies to weave together naturally within a Wand or Staff.

Bio-Sovereignty (The Verdant Font + The Crucible of Kings)

* Concept: The "Divine Right" applied directly to cellular growth and command.

* Weapon Mod (Subjugating Spores): Targets Attack Speed/Fire Rate and Status Duration. A high-Quality proc injects a dominant biological command into the target, drastically reducing their action economy and extending the duration of any other debuffs currently on them.

* Defense Mod (Regal Carapace): Targets Recharge Rate (Reload) and Armor/DR. The armor rapidly regenerates its own physical ablative plating. High-Quality expressions grant a massive, temporary boost to the wielder's battery recharge rate whenever they are struck.

Inevitable Decree (The Synod of Endings + The Crucible of Kings)

* Concept: The absolute, recorded law. Bureaucratic inevitability meeting the weight of the crown.

* Weapon Mod (The Final Edict): Targets Critical Multiplier and Status Chance. The weapon strikes with the weight of an unavoidable judgment. A high-Quality proc applies a status that

completely silences the target (Momentum Lock), stripping their ability to trigger complex magical actions or buffs.

- * Defense Mod (Statutory Wards): Targets Faction Damage Resistance and Stability. The defense creates a field of absolute legal reality. It heavily reduces damage from chaotic, unregistered, or aberrational sources. High-Quality expressions grant the wielder absolute immunity to knockbacks, forced movement, or stagger.

Causal Stealth (The Synod of Endings + The Palimpsest)

- * Concept: The transition of the Palimpsest deliberately omitting data from the Synod's record.

- * Weapon Mod (The Redaction): Targets Punch Through and Accuracy. The projectile or strike is temporarily deleted from local causality until it hits the target. High-Quality expressions allow attacks to completely bypass physical cover, shields, and defensive constructs, resolving against the target's base stats.

- * Defense Mod (Omission): Targets Evasion/Dodge and Status Duration. The wielder becomes a clerical error. High-Quality expressions severely reduce the duration of any hostile status effect applied to the wielder, as the Synod's mechanics refuse to "record" the injury.

Elemental Biology (The Verdant Font + The Borderlands)

- * Concept: Rapid, hyper-accelerated environmental adaptation.

- * Weapon Mod (Primal Siphon): Targets Multishot and Elemental Damage. The weapon organically sprouts additional barrels or striking surfaces mid-swing. High-Quality expressions fire additional projectiles without consuming extra battery capacity, applying secondary elemental damage.

- * Defense Mod (Adaptive Flesh): Targets Elemental Resistance. When the wielder is struck by an elemental attack, the armor biologically adapts in real-time. High-Quality expressions grant near-immunity to that specific damage type for the remainder of the encounter.

Emulsions (Opposed Planes - Catalyst Required)

When attempting to fuse planes with diametrically opposed philosophies (such as Life vs. Death, or Chaos vs. Order), the components will violently reject each other, causing the Artifice check to automatically fail or trigger a severe mutation. To force these concepts into a single item, the crafter must use a Daedalon Catalyst from the Hidden Forge.

The resulting Emulsions are incredibly powerful, reality-breaking effects that require massive EML thresholds.

The Paradox of Moros (The Verdant Font + The Synod of Endings)

- * Concept: Hyper-accelerated decay forcefully chained to explosive, rampant growth.

- * Weapon Mod (Necrotic Bloom): Targets Base Damage and Critical Chance, but at a cost. The weapon feeds on the wielder's own vitality. A high-Quality proc instantly slays a weakened

target and violently rapidly-ages their corpse into a massive, explosive biological trap that damages nearby enemies.

- * Defense Mod (Martyr's Chrysalis): Targets Battery Capacity and Survival (HP). If the wielder is reduced to 0 HP, the armor instantly drains the entire battery to zero. It throws the wielder into an impenetrable, petrified stasis (Synod) while simultaneously force-healing them (Font), effectively granting a second life at the cost of being temporarily immobilized and entirely out of power.

The Tyrant's Forge (The Crucible of Kings + The Borderlands)

- * Concept: Forcing pure, untamed elemental chaos into absolute, regimented obedience.

- * Weapon Mod (Regimented Destruction): Targets Range, Spread, and Recoil. It takes wild, area-of-effect elements (like Steam or Lava) and compresses them into hyper-focused, pinpoint beams. A high-Quality expression completely eliminates all recoil and spread penalties, allowing for devastating, surgical elemental strikes at sniper ranges.

- * Defense Mod (Elemental Dictate): Targets Absorption and Recharge Rate. The wielder's armor simply outlaws incoming elemental physics. A high-Quality proc completely absorbs a direct elemental attack and converts 100% of that energy into raw capacity, instantly reloading the wielder's weapons or restoring their drained batteries.

No, that is not an exhaustive list. The combinations provided represent the macro-intersections of the five primary metaphysical planes (The Borderlands, The Verdant Font, The Crucible of Kings, The Palimpsest, and The Synod of Endings).

Rather than a static, finite list, this system operates as a generative engine for Storytellers. The true number of combinations multiplies exponentially when you factor in the specific elemental variables of the Borderlands and the shifting ideological aspects of the gods who govern the outer planes.

Here is how Storytellers can continuously generate new combinations on the fly using the established mechanics.

1. The Borderlands Multiplier (Elemental Nuance)

When combining an Outer Plane with the Borderlands, the resulting effect completely shifts depending on which of the four base elements (Earth, Air, Fire, Water) is used as the anchor. For example, we looked at Entropic Stasis (Synod + Borderlands [Air]), which suffocates kinetic momentum. But combining the Synod with the other elements produces entirely different un-catalyzed effects:

- * Synod + Earth (Fossilization): Targets Armor/DR and Status Duration. The stasis effect targets physical matter, instantly calcifying flexible armor or natural plating into brittle, easily shattered glass.

- * Synod + Fire (Cold Cauterization): Targets Critical Multiplier and Status Chance. The recording nature of the Synod "deletes" the thermal energy of the fire, creating an aggressive,

freezing burn that suppresses biological healing or regeneration (preventing Verdant Font effects).

- * Synod + Water (The Styx Effect): Targets Recharge Rate and Multishot. The water becomes a heavy, memory-draining fluid. High-Quality procs strip away the target's prepared spells, active buffs, or battery charges, filing them away into the Synod's archives.

2. The Aspect Divergence (The Divinity Multiplier)

The Outer Planes are not monoliths; they are governed by gods with fiercely competing dual aspects. The mechanical output of a combination changes depending on which specific ideology the component was harvested or crafted under.

Take the combination of The Verdant Font + The Crucible of Kings. We established Bio-Sovereignty, but that changes depending on the political/divine alignment of the Crucible component:

- * The Luxos/Themis Variant (Benevolent Rule + Growth): The resulting effect is Symbiotic Mandate. Targets Status Duration and Range. The weapon doesn't harm; it creates a supportive network. Firing it into an ally grants them temporary ablative HP that rapidly regenerates, sharing the wielder's battery capacity to keep the ally in the fight.

- * The Ignislor/Lex Variant (Tyranny + Growth): The resulting effect is Parasitic Subjugation. Targets Attack Speed and Base Damage. The weapon forcefully overwrites the target's biology. It heavily taxes their action economy, draining their movement speed and converting that stolen kinetic energy into raw damage for the wielder's next attack.

3. Incorporating the Domains of Mortal Friction

Storytellers can also build components around the conceptual domains that govern mortal friction, such as Commerce (Valorin), Conflict (Bellum Hegemon), or Chaos (Rhapsodia). When these concepts are bound into wands or staves, they target the meta-mechanics of the encounter.

- * The Market Fluctuation (Valorin [Mercatus] + Borderlands [Any]): Targets Critical Chance and Status Duration. The effect operates on an escalating ledger. Consecutive hits on the same target drastically multiply the critical chance, representing a "bull market" of damage, but switching targets resets the value to zero.

- * The Anarchist's Spark (Rhapsodia [Cacophony] + Palimpsest): Targets Spread/Accuracy and Punch Through. A highly volatile, un-catalyzed combination. The attack physically fractures reality in unpredictable trajectories, turning a single pinpoint shot into a chaotic, bouncing ricochet that ignores cover but risks striking allies.

The Storyteller's Heuristic

To generate any effect, a Storyteller simply needs to ask three questions:

- * What is the Noun? (e.g., The Palimpsest = Transition/Illusion).
- * What is the Verb? (e.g., The Synod of Endings = Record/Stasis).
- * Are they Opposed? (If yes, require a Catalyst and increase the required EML. If no, the blend is natural).

By matching those concepts to the concrete mod values (Crit, Base Damage, Status, Multishot, etc.), the system provides infinite, mathematically sound combinations that reinforce the narrative physics of the world.

The issue is that a plane can act as either the noun or as both when combined with a secret forge catalyst component. This is why i was asking for a codified list of what the individual effect does, what the para-planar and para-elemental combinations are and from there we can finish out the effects of combining opposed planar effects and combined para-planar and/or para-elemental effects. This isn't an impossible list i just need the components like I've been asking for.

Here is the codified foundational list of base components and their stable combinations. This establishes the exact mechanical targets for the numeric modifiers before moving into the highly volatile, catalyst-required Emulsions.

When an item is forged naturally (without a Catalyst), one component acts as the foundational physics (the Noun) and the other modifies its behavior (the Verb).

Phase 1: The Base Components (The 9 Foundations)

These are the pure, un-combined elements and planar forces. Slotting these directly into a Wand or Staff targets these specific numeric values.

The Borderlands (The Physical Nouns)

- * Fire: Targets Base Damage and Status Chance. (Weapon: High thermal damage / Defense: Flat retaliatory damage to attackers).
- * Water: Targets Recharge Rate (Reload) and Recoil/Stability. (Weapon: Fluid action economy / Defense: Kinetic absorption, reducing incoming physical damage).
- * Earth: Targets Critical Multiplier and Armor/DR. (Weapon: Massive blunt force, sundering / Defense: Hardened physical resistance).
- * Air: Targets Range/Reach and Attack Speed/Fire Rate. (Weapon: High-velocity strikes / Defense: Flat bonuses to Dodge/Reflex).

The Outer Planes (The Conceptual Verbs)

* The Verdant Font (Life/Growth): Targets Status Duration (Buffs) and Regeneration. (Weapon: Symbiotic healing to the wielder on hit / Defense: Accelerated ablative HP/Armor repair).

* The Crucible of Kings (Sovereignty/Weight): Targets Accuracy/Spread and Stability. (Weapon: Inevitable, homing strikes that ignore minor cover / Defense: Absolute immunity to knockback or forced movement).

* The Palimpsest (Transition/Illusion): Targets Punch Through and Evasion. (Weapon: Projectiles that phase through physical barriers / Defense: Intangibility frames, ignoring a percentage of incoming hits).

* The Synod of Endings (Record/Stasis): Targets Status Duration (Debuffs) and Nullification. (Weapon: Silences or locks the target's momentum / Defense: Passively degrades incoming magical projectiles or buffs).

* The Hidden Forge / Daedalon (Crafting/Catalyst): Targets Battery Capacity and CML Cost Reduction. (Base component functions purely as an efficiency engine until used as an Emulsion Catalyst).

Phase 2: Para-Elemental Combinations (No Catalyst Required)

These are the natural, stable combinations of the four Borderlands elements mixing with each other.

* Frost (Air + Water): Targets Status Duration and Attack Speed (Reduction). Applies localized thermal drain, severely reducing target action economy.

* Current (Air + Fire): Targets Multishot and Spread. Volatile energy that arcs; grants free secondary strikes against adjacent targets.

* Acid (Earth + Water): Targets Status Chance and Armor/DR (Reduction). Corrosive slurry that permanently degrades the target's physical damage resistance for the encounter.

* Dust/Sand (Earth + Air): Targets Accuracy (Reduction) and Evasion. Abrasive clouds that blind sensors and drastically lower the target's chance to hit.

* Magma (Earth + Fire): Targets Base Damage and Critical Chance. Superheated mass that acts as a pure, overwhelming damage multiplier.

* Steam (Fire + Water): Targets Range/Reach (Area of Effect) and Knockback. Explosive expansion of kinetic force that forcibly repositions enemies.

Phase 3: Para-Planar Combinations (Non-Opposed, No Catalyst Required)

When the Borderlands mix with an Outer Plane, or when two non-opposed Outer Planes mix, one assumes the role of the base physics (Noun) and the other modifies it (Verb).

- * Adaptive Flesh (Verdant Font + Borderlands [Any]): The Font acts as the Verb, constantly adapting the Noun (Element). Targets Elemental Resistance (Defense) or Adaptive Elemental Damage (Weapon).

- * Bio-Sovereignty (Verdant Font + Crucible of Kings): Targets Status Duration and Recharge Rate. The divine right to rule applied to cellular growth. (Weapon: Subjugating commands / Defense: Dominant regeneration).

- * Inevitable Decree (Synod of Endings + Crucible of Kings): Targets Critical Multiplier and Stability. The recording of a sovereign law. (Weapon: Unavoidable judgment strikes / Defense: Absolute legal immunity to chaotic/aberrant effects).

- * Causal Stealth / The Redaction (Synod of Endings + Palimpsest): Targets Punch Through and Evasion. The transition omitting data from the record. (Weapon: Causal deletion of a projectile until impact / Defense: Clerical omission of the wielder from enemy targeting).

- * The Ghost-Breach (Palimpsest + Borderlands [Any]): Targets Accuracy and Armor Bypass. The physical element transitioning into a phase-state. (Weapon: Touch-attacks that ignore armor / Defense: Phasing through solid matter).

Phase 4: Catalyst Emulsions (Opposed Planes & Complex Para-Elements)

When combining antithetical planes (Life vs. Death, Order vs. Chaos), or when attempting to merge two Para-Elements together (e.g., Magma + Frost), the natural laws violently reject one another. A Daedalon Catalyst (Tier 6+) must be used.

With the Catalyst, the planes no longer act as Noun and Verb. They emulsify into a singular, brand-new Meta-Noun that overwrites reality.

- * The Decree (Crucible of Kings + Palimpsest + Catalyst): Order emulsified with Transition. Targets Absolute Accuracy. The attack becomes a law of reality; it completely ignores all Evasion, Dodge, and Concealment, resolving strictly against physical mass.

- * The Paradox of Moros (Verdant Font + Synod of Endings + Catalyst): Life emulsified with Stasis/Death. Targets Base Damage and Survival (HP). The weapon triggers catastrophic biological growth instantly followed by absolute necrotic stasis. (Weapon: Target explodes into a petrified biological hazard / Defense: Drops wielder to 0 HP but encases them in an impenetrable, healing stasis lock).

- * The Anarchist's Spark (Rhapsodia + Crucible of Kings + Catalyst): Chaos emulsified with Sovereignty. Targets Multishot and Punch Through. The anti-law. (Weapon: A single projectile

physically fractures reality, splintering into unpredictable, ricocheting trajectories that ignore all cover).

* Total Annihilation / Singularity (Para-Element + Opposed Para-Element + Catalyst): (e.g., Magma + Frost). Targets Status Chance (100%) and Area of Effect. Forces thermodynamic collapse. Creates a localized, temporary vacuum that strips all buffs, debuffs, and magical effects from everything caught in the blast radius.

The buffs/debuff durations are not what you're thinking when considering the verdant font and synod of endings. The verdant font would make things go faster but or optionally costs more as the plane represents the fast nature of the life cycle or food chain - this can be weaponized to bring an opponent's life to an end faster through the use of potent but short lived poisons and diseases. On the other side is the synod of endings and it would slow down reactions and causing calcification and preservation. It acts a bit like yin-yang in execution when taken together. A poison or disease that moves or acts to fast ends before killing the victim one that moves to slow would likely just be more of a nuisance than a threat. When they are brought into balance and emulsified is when a choice is made to switch the verb with the noun or take the best of both worlds and reduce the drawbacks. So in this case we are looking at a draft of something akin to stonesskin or flesh to stone that can have a long duration (closer to stone skin) or act as a poison having the secondary effect have a long duration (closer to a creeping poison that slowly turns a creature to stone permanently).

The palimpsest is not illusion per say but could facilitate that if combined with the crucible of kings as deception is a keystone feature in social settings and drives mortal created conflict.

Reframing the Verdant Font and the Synod of Endings as opposing axes of time and intensity—rather than just "life" and "death"—creates a much more sophisticated mechanical engine. It turns the duration and potency of a status effect into a tactical slider. Likewise, pulling the Palimpsest away from traditional "light and sound" illusions and focusing on its nature as a transitory, layered reality makes its combination with the Crucible of Kings much more thematic. It becomes about conceptual deception and social manipulation. Here is how these corrected interactions map to the concrete modifiers and expressions.

The Axes of Time & Intensity

When used as base components, these two planes target the Status Duration, Status Chance, and Action Speed modifiers in completely opposite directions.

The Verdant Font (Hyper-Acceleration & Consumption)

* Concept: The fast-acting food chain. High volatility, massive immediate impact, rapid burnout.

* Weapon Mod: Targets Status Chance (Increase) and Status Duration (Decrease). Applies incredibly potent but short-lived neurotoxins, flesh-eating diseases, or localized necrosis. If the target survives the initial, devastating burst of damage or penalty, the effect burns itself out quickly.

* Defense Mod: Targets Attack Speed/Fire Rate (Increase) but penalizes Battery Capacity/Efficiency. The wielder's systems are hyper-stimulated, allowing for rapid bursts of action, but requiring immense energy upkeep.

The Synod of Endings (Stasis & Calcification)

- * Concept: The slow, inevitable preservation. Low immediate impact, infinite duration.

- * Weapon Mod: Targets Status Duration (Increase/Permanent) and Attack Speed (Decrease).

Applies slow-acting petrification, creeping paralysis, or lethargy. It doesn't kill quickly, but it never goes away on its own. A nuisance that slowly calcifies into a lethal threat if not actively cured.

- * Defense Mod: Targets Armor/DR (Increase) and Movement Speed (Decrease). The wielder enters a state of localized stasis, hardening their flesh or armor into an unyielding, fossilized state, trading mobility for absolute preservation.

The Emulsion: The Balanced Equation (Font + Synod + Catalyst)

When brought into balance through a Daedalon Catalyst, the Yin-Yang execution allows the crafter to isolate the best parts of both planes, eliminating the drawbacks (the Font's rapid burnout, or the Synod's slow onset).

The Paradox of Moros (Refined Emulsion)

- * Weapon Expression (The Creeping Stone): Combines the lethal, aggressive consumption of the Font with the permanent, calcifying duration of the Synod. Targets Base Damage (DoT) and Status Duration (Permanent). This acts as a devastating, self-replicating petrification poison. It strikes with the speed of a Font-born disease but permanently converts the victim's flesh to stone, actively fighting off mundane attempts to cure or resist it.

- * Defense Expression (Living Petrification / Stoneskin): Combines the absolute preservation of the Synod with the regenerative speed of the Font. Targets Armor/DR and Regeneration. The wielder's flesh turns to an unyielding stone that retains total flexibility and mobility. When this stone armor is chipped or shattered by an attack, the Font's hyper-accelerated growth instantly regrows the missing stone, providing a massive, persistent, and self-repairing physical defense.

The Architecture of Deception (Palimpsest + Crucible of Kings)

Because the Palimpsest governs transition, echoes, and layered reality, it isn't projecting holograms. It is overlapping fragments of what was or what could be over the present. When this transitory physics (Noun) is subjected to the societal, hierarchical weight of the Crucible of Kings (Verb), the result is weaponized social deception.

Manufactured Dissent (No Catalyst Required)

- * Concept: Exploiting the layered realities of the Palimpsest to manipulate the social laws and perceptions governed by the Crucible.

- * Weapon/Utility Mod (The Sovereign's Echo): Targets Aggro/Targeting and Faction Damage. Instead of a visual illusion, the weapon fires a conceptual "echo" of authority or threat. It forces enemies to perceive a transitioned reality where their allies are suddenly viewed as usurpers or high-priority targets, manipulating the social hierarchy of the battlefield to cause infighting.

- * Defense/Utility Mod (The Diplomat's Facade): Targets Evasion (Social/Mental) and Accuracy (Deception). The wielder wraps themselves in a transitioned layer of the Palimpsest, projecting the absolute, unquestionable "weight" of a sovereign. It doesn't change their physical face; it changes how their presence is recorded by the observer's mind. It grants massive bonuses to social infiltration, allowing the wielder to bypass guards or dictate terms because the observer's mind fully accepts the conceptual echo that the wielder belongs there and holds authority over them.

Continuing the codified list, we can expand the system outward from the primary metaphysical planes into the remaining cross-sections, the societal domains (the Gods of Mortal Friction), and the "Directors" of the setting.

Here is the mechanical breakdown of how these remaining forces map to the concrete numeric values of wands and staves.

Phase 3 Continued: Non-Opposed Core Combinations (No Catalyst)

Evolutionary Echoes (The Palimpsest + The Verdant Font)

- * Concept: Transition (Layered Reality) applied to Hyper-Acceleration (Life). The rapid, generational iteration of biology happening in a fraction of a second.

- * Weapon Mod (Darwinian Projectiles): Targets Multishot and Status Chance. The weapon fires a projectile that rapidly "evolves" mid-air. A high-Quality expression causes the shot to splinter into multiple overlapping echoes of itself, each carrying a different biological toxin, overwhelming the target's resistances by sheer rapid-fire variety.

- * Defense Mod (Ghost-Shedding): Targets Evasion and Regeneration. When struck, the wielder's armor undergoes hyper-accelerated growth while simultaneously shifting a layer of reality. The attack hits a localized, shed "husk" of the wielder, granting temporary intangibility while the true armor instantly regrows beneath it.

Phase 5: The Domains of Mortal Friction (The Societal Verbs)

The gods who govern the mortal condition (Civilization, Nature, Commerce, Conflict) can also have their essences crystallized into components. These target the meta-mechanics of the encounter.

The Concrete Jungle (Agora [Civilization] + Verdena [Nature] + Catalyst)

- * Concept: An Emulsion of the ultimate opposed societal forces. Weaponized, unnatural terraforming.

- * Weapon Mod (Smog-Briar): Targets Area of Effect and Armor/DR (Reduction). The weapon fires a localized ecological disaster. A high-Quality proc creates an expanding zone of suffocating, synthetic overgrowth (glass-shard thorns or acid-weeping vines) that actively hunts and degrades manufactured armor and shields within the radius.

- * Defense Mod (The Bastion Root): Targets Absorption and Stability. The defense forces nature to act as a perfect, unyielding architectural structure. When the wielder plants their feet, the armor violently roots into the environment, dropping movement speed to zero but granting near-absolute damage absorption and immunity to all forced movement.

The Predatory Ledger (Valorin [Commerce] + Thalassus [Perilous Labor] + Catalyst)

- * Concept: An Emulsion of venture capitalism and the raw, dangerous toil of the sea. The ultimate high-risk, high-reward mechanic.

- * Weapon Mod (The Margin Call): Targets Critical Multiplier and Attack Speed. The weapon functions on a debt ledger. Each consecutive, successful strike against the same target exponentially increases the Critical Multiplier. However, if the wielder misses, or switches targets, the "bubble bursts," and the accumulated energy violently backlashes, draining the wielder's battery and potentially inflicting damage on them.

- * Defense Mod (Liquidated Assets): Targets Battery Capacity/Efficiency and Survival (HP). The armor treats physical harm as an economic transaction. A high-Quality expression allows the wielder to "pay" for incoming damage using their weapon's battery charges instead of their HP. When the battery reaches zero, they are completely defenseless.

The Calculus of Attrition (Bellum Hegemon [Conflict] + The Synod of Endings [Stasis])

- * Concept: Natural combination. The cold, mathematical reality of prolonged warfare meeting the absolute preservation of the record.

- * Weapon Mod (The Siege Engine): Targets Base Damage and Punch Through, but heavily penalizes Movement Speed. The weapon is designed to break fortifications over time. Each time it is fired from a stationary position, its damage and ability to punch through physical cover incrementally increase.

- * Defense Mod (Trench Warfare): Targets Armor/DR and Status Duration (Reduction). The wielder is treated as a fortified bunker. It heavily reduces the duration of all incoming damage-over-time effects (like fire or acid) and converts a percentage of all incoming piercing or slashing damage into non-lethal impact force.

Phase 6: The Directors' Influence (Fate & Love)

The Selûnae (Fate) and The Chorus of the Heart (Love/Relationships) do not provide raw elemental physics. When their components are slotted, they act as Meta-Modifiers, directly altering the mathematical probability of the item.

The Fated Trajectory (The Selûnae)

- * Concept: The Unbroken Chain of Causality weaponized.

- * Weapon Mod (The Inevitable End): Targets Critical Chance and Accuracy. A high-Quality Selûnae component does not add damage; it bends probability. It grants a massive, flat bonus to Critical Chance. At Masterwork levels, a missed attack roll can be "re-read backwards," allowing the wielder to automatically reroll a miss once per round, because the first shot was simply a necessary link in the chain leading to the true strike.

The Empathetic Resonance (The Chorus of the Heart)

- * Concept: The bonds of loyalty, obligation, and shared trauma turned into a tactical network.

- * Utility/Support Mod (The Shared Cup): Targets Range and Status Duration (Buffs). This component connects the wielder's equipment to their allies. When the wielder triggers a positive effect (like a rapid reload, a burst of speed, or a healing proc), a high-Quality Chorus component mirrors a percentage of that buff to all contracted or bonded allies within range, utilizing the underlying emotional connections as a conduit for the magic.
